

UNIVERSAL USE IN ANY ENVIRONMENT

steadyPRINT optimizes your Microsoft printing infrastructure, irrespective of whether a pure Windows, Citrix or VMware environment is used. The manufacturer-independent approach of steadyPRINT allows its use in heterogeneous environments and supports all end devices (PC, Mac, Notebook, Thin Client, Mobile Device) and almost all printer types.

OPTIMIZED ADMINISTRATION

Due to the optimization and automation of processes, the use of steadyPRINT significantly reduces the number of support tickets. The *steadyPRINT Center* enables the intuitive administration of any number of print environments. Printer assignments based on users, groups, folders, organizational units and computers (even Thin Clients) can easily be created by drag & drop and distributed by means of centrally provided printer settings (Templates). The manufacturer-independent universal driver *steadyPRINT VPD* ensures an effective and standardized driver management. Moreover, the use of steadyPRINT simplifies all administrative tasks by a comprehensive management of default printers or the simplification of a Microsoft print server migration.

HIGH AVAILABILITY & MONITORING

Reliable print servers/print server clusters and load balancing guarantee an optimum availability. Even printer failures can be intercepted by the configuration of a backup printer. The use of *Branch Office Printers* ensures optimized WAN connections when branch offices without print server are connected. A permanent monitoring, intelligent reportings and the alert system enable proactive intervention in case of potential problems and thus a significant relief of the IT department.

USER EXPERIENCE

The steadyPRINT approach goes far beyond the pure printing of documents and enables intelligent document management in every situation. Users are always automatically connected to the correct printer (even when changing locations or with mobile users). Login times are reduced by 30% compared to GPOs. The Client component *steadyPRINT Agent* provides a significant increase of productivity and satisfaction thanks to its intuitive handling and numerous additional functions.

SECURITY

Sensitive data is protected thanks to a secure document control and storage, print job encryption and PDF/A integration (secure archiving). Moreover, steadyPRINT supports you in implementing and keeping specifications according to EPCIP, the German IT-Security Law IT-Sig 2.0 and GDPR..

AUTOMATE & OPTIMIZE PROCESSES

Workflows that are centrally provided or even individually created by users guarantee faster and safer processes. Actions from different categories (e.g. printing with special settings, PDF processing, encryption, document storage, mail transmission, etc.) are automatically processed enabling a secure and efficient document management.

COST OPTIMIZATION

Rule-based printing enables considerable savings of consumables (e.g. toner and paper). Thanks to optimized processes, unnecessary prints will be avoided. A permanent monitoring of the print environment guarantees the early identification of deficiencies. This way, the costs of your print environment can be reduced to a minimum.

SUPPORT OF SPECIALIST SOFTWARE

The *steadyPRINT vName* technology enables secure and highly available printing from special applications and a drastic reduction of the administrative effort, among others with KIS (e.g. Agfa, ORBIS, Cerner medico), nursing software, DATEV or ERP systems (e.g. SAP, Navision, Sage).

FAST AND SIMPLE IMPLEMENTATION

The implementation of steadyPRINT is done in a fast and efficient way within a short time during running operation. The existing print environment is imported and inventoried while being restructured and is immediately ready for operation.

TECHNOLOGY FROM PRACTICE

Created from a customer project, steadyPRINT is constantly being developed further with a focus on its practical use. In close partnership with our customers we are able to create new features from real requirements which are integrated to the standard solution. With the progressive connection to external systems (e.g. SAP, IBM AS/400) steadyPRINT fulfils current and future standards.

THE SUITABLE LICENSING

steadyPRINT is licensed on the basis of servers as well as users or devices. As an alternative to buying licenses, our *steadyPRINT 365* subscription model is available. Apart from regular licensing, special licenses for the health care sector (*steadyPRINT MED*) and for SMEs (*steadyPRINT SMART*) can be obtained.
