

WHY steadyPRINT?

steadyPRINT ALSO OPTIMIZES YOUR PRINT ENVIRONMENT

steadyPRINT optimizes your Microsoft printing infrastructure, independent of whether you use Windows, Citrix or VMware.

The manufacturer-independent approach of steadyPRINT allows its use in heterogeneous environments and supports all end devices (PC, Mac, notebook, thin client, mobile device) and almost all printer types.

FEWER TICKETS, LESS EFFORT, MORE TIME FOR REAL IT WORK

The use of steadyPRINT significantly reduces the number of support tickets by optimizing and automating processes. The steadyPRINT Center enables the intuitive administration of any number of printing environments. Printer assignments based on users, groups, folders, organizational units, and computers (including thin clients) can be easily created using drag & drop and distributed with centrally provided printer settings (templates) (based on Microsoft Entra and Active Directory).

The manufacturer-independent universal driver steadyPRINT VPD provides effective and standardized driver management. In addition, the use of steadyPRINT makes all administrative tasks easier, e.g., through a comprehensive default printer management or the simplification of Microsoft print server migration. In addition to the desktop version, steadyPRINT offers an additional web-based version with WebCenter, allowing you to work from anywhere with any device.

WORK WITHOUT DOWNTIME AND ALWAYS UP TO DATE

With reliable print servers and intelligent load balancing, steadyPRINT ensures optimal performance and smooth operations. Even printer failures can be covered by configuring a backup printer. The use of the hybrid printer provides WAN route optimization when connecting additional locations without their own print server. Permanent monitoring, intelligent reports, and the alerting system enable proactive intervention in the event of potential problems, significantly reducing the workload of the IT department.

SECURE PROCESSES, FASTER WORKFLOWS, FEWER ERRORS

Centrally provided workflows and those created individually by users ensure fast and secure processes. Actions from various categories (e.g. printing with special settings, PDF processing, encryption, document storage, e-mailing etc.) are processed automatically, enabling secure and efficient document management.

SECURE DATA, MAXIMUM PROTECTION & COMPLIANCE

Thanks to secure document routing and storage, print job encryption, and PDF/A integration (secure archiving), sensitive data is protected. In addition, steadyPRINT also supports you in implementing and complying with requirements under KRITIS, IT-Sig 2.0, NIS2, and GDPR.

USER EXPERIENCE – EFFICIENT AND SATISFIED EMPLOYEES

The steadyPRINT approach goes beyond simply printing documents and enables intelligent document management in every situation. Users are always automatically connected to the correct printer (even when changing locations or for mobile users). Login times are reduced by 30 % compared to GPOs. Thanks to its intuitive operation and numerous additional functions, the steadyPRINT Agent client component significantly increases productivity and satisfaction.

COST OPTIMIZATION

Rule-based printing enables considerable savings in consumables (e.g., toner and paper). Thanks to optimized processes, unnecessary printouts are avoided. Continuous monitoring of the printing environment ensures early detection of potential weak points. This allows you to minimize the costs of your printing environment. In addition, the use of automated processes accelerates work steps, prevents errors, and reduces costs.

HIGHLY AVAILABLE PRINTING FOR CRITICAL SPECIALIST APPLICATIONS

The steadyPRINT vName technology enables secure and highly available printing from special applications and a drastic reduction in administrative effort, including with hospital information systems (HIS), nursing software, DATEV, or ERP systems (e.g., SAP).

FAST AND EASY IMPLEMENTATION WITHOUT INTERRUPTION

The implementation of steadyPRINT takes place quickly and efficiently within a very short time during ongoing operations. The existing printing environment is imported and inventoried, can be restructured at the same time, and is immediately ready for operation.

TECHNOLOGY DEVELOPED FROM PRACTICAL EXPERIENCE FOR YOUR NEEDS

Developed from a customer project, steadyPRINT has been continuously refined for over 20 years with a focus on practical benefits. In close contact to our customers, new features arise from actual requirements, which are integrated into the standard solution. With its ongoing integration with external systems (e.g. SAP), steadyPRINT meets current and future requirements.

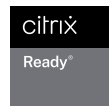

THE RIGHT LICENSING FOR YOU

steadyPRINT is licensed on user basis, including server licenses, updates and support.
