Everyone has to print.
Print *SMART*!

steady**PRINT**® *SMART*

Professional printer management for small and medium-sized businesses.

as of 33 USD / user!

incl. print server reliability

Price per year, 3-year term

Why each business should deal with the subject of printing.

Everyone has to print. Why changing something that is actually working – at least most of the time? Quite simple, because there are ways to do it better, faster, less expensive and more reliable, simply SMARTer. Because: the use of a professionsl printer management solution is even worthwhile for small companies. And there's more to it than that. Improve workflows, avoid failures and save time and money.

steadyPRINT SMART was especially developed for small and medium-sized businesses. We will show you what is possible. And what you might not even have thought of in printing matters:

PDF functions

So much more that just a PDF printer. Benefit from useful additional functions that make your daily work easier.

With steadyPRINT you can easily create PDF documents, store them locally or in the cloud or send them automatically via e-mail. Or you merge several documents into one single PDF (PDF merge). Maybe, you would also like to store templates (e.g. stationery) automatically or apply control characters from other programs (e.g. e-mail address, invoice no. etc. from your ERP software). Everything is possible with just one solution.

Print anytime and anywhere

Changing workplaces, mobile users. Nowadays, people are not just sitting next to the same printer.

You are often travelling from one office to another or maybe you even go home to continue working from there? steadyPRINT automatically adjusts your printer assignments in the background so that you are always and automatically connected to the correct printer. Or you would like to print whilst travelling but have no physical printer within your reach? steadyPRINT takes care and the printing process automatically starts as soon as you get back to the office.

Improve and automate processes

Many processes can be automated. You click once and everything is done.

Imagine you could turn an invoice into a PDF document with just one click, store this document, send it to your boss by e-mail at the same time and print it on stationery. No problem, with steadyPRINT you can create individual workflows and thus save a lot of time for important tasks.

Avoid failures, reduce costs

Intercept print server and printer problems. Save cash money thanks to rule-based printing.

Whether print server failure or printer problem: just keep on printing thanks to our reliability function and be informed of any problem at an early stage.And apart from the cost savings due to avoided failures and better processes, you can save cash money by rule-based printing: Have for example e-mails printed only in monochrome or documents having more than 50 pages only in duplex.

Printing from special applications

ERP software, DATEV etc. – many special applications have one thing in common: as soon as it comes to printing, it becomes complicated.

No more complicated printer management in special applications: Just avoid all problems by outsourcing the printer management to steadyPRINT. This way, you will use only one single (virtual) printer in your ERP software – no matter who is printing what at which time and at which printer.

Just imagine that there will only be one "invoice printer" in your ERP software. With steadyPRINT you can define to which printer your print job will be sent if you select this virtual "invoice printer". This can be a different physical printer for each employee. You can also create several printer assignments, e.g. for employees who travel between different locations. If an employee goes from location A to location B, steadyPRINT automatically adjusts the printer assignment in the background. In the ERP software nothing changes, the "invoice printer" is still the printer to be selected.

...and so much more

These pages only represent a part of the functions that are available to you.
steadyPRINT can do so much more. Everything that is required in the field of printer administration can be handled centrally and comfortably in a intuitive management console. No additional hardware nor any further licenses are needed.

steady**PRINT**®

Reduce administrative expense

Centralized management in a clear console. Driverless printing instead of driver chaos.

Once a certain company size has been reached, the administrative effort increases. Obviously, this also affects the IT and thus the print environment. Benefit from a clear management console and centrally complete all tasks related to the printer administration. Save a lot of time by using our virtual printer driver which eliminates the entire driver maintenance of your printers.

By the way: With steadyPRINT, the average login time at your workplace is 30% faster (compared to the printer assignment via group policies). Rather use your time for useful things.
